

# Ankit Saini

*Sr. software engineer*

Walk into PayNet office any day and you are likely to find a lean man with a kind face deep into developing applications on his workstation or engrossed in animated discussions with his colleagues regarding project development. Meet Ankit Saini, Sr. Software Engineer with PayNet and architect of several state-of-the-art fintech applications.

## **Formative years**

A Master in Computer Application with Uttar Pradesh Technical University (2016), Ankit is someone who loved coding from the start. He believed in the power of programming in transforming the lives of the people and this was a major reason of him choosing a career in coding. A resident of a small town in UP, Ankit comes from a joint family who have been traditionally involved in agriculture and politics.

## **Career journey**

Ankit began his career as a software engineer in ChromeInfo Technologies (2016) and picked crucial knowledge of application development in his stint of close to three years. Thereafter he joined PayNet as a Senior Software Engineer (Sep 2018) and has continued working with us till date.

## **PayNet stint**

A key figure behind a string of projects PayNet has handled, Ankit straddles responsibilities of a developer as well as a leader in the organization. While he has himself worked as a lead developer in several projects, he also provides crucial guidance to other developers on the team working on complex stuff.

Right through his education years, he was keen on solving/automating the real life problem using programming and his PayNet stint has enabled him do just that. In the coming years, he sees himself as an industry expert others go to for ideas, help and strategy.

## **A personal insight**

Ankit is a compassionate and honest person, who is always willing to take responsibility for my actions. When he is free, he likes to tell stories, explore new cultures and music.
